SUMMARY

DevOps Engineer with **4 years** of experience in building and automating **CI/CD** pipelines using **Jenkins** and provisioning infrastructure with **Terraform**. Hands-on expertise in containerization and orchestration using **Docker** and **Kubernetes**, enabling scalable and reliable deployments. Strong focus on **DevSecOps**, **shift-left** practices, and support end-to-end application delivery from DEV to PROD.

SKILLS

Operating Systems: **Linux**

Configuration Management: **Ansible**

Build Tools: **Maven, NPM, pip**

Continuous Integration: **Jenkins CI/CD**

IaC: **Terraform**

Version Control Tools: **Git, GitHub**

Languages/Scripts: **Python, Shell**

Cloud Platform: **AWS**

AWS Services: EC2, S3, IAM, EBS, VPC, Subnets, Auto scaling, Security Groups, ECR, EKS, CDN

Containerization: **Docker**

Container Orchestration: **Kubernetes**

Monitoring Tools: **Prometheus, Grafana**

Code Analysis: **SonarQube**

EXPERIENCE

Associate Cloud Analyst

CDK Global | Project: CDK - Automotive Dealer Management & Digital Retail Platform

May 2026 – Present

- Manage and deploy workloads on Kubernetes (AWS EKS) across multiple business units.
- Perform Kubernetes rolling restarts and cluster upgrades across AWS EKS environments.
- Monitor infrastructure health using Grafana and Prometheus with automated alerts.
- Build and deploy Docker images for Java, Python and Node.js applications.
- Enhanced cloud cost optimization using Python with **AWS Lambda** and **EventBridge**, scheduling non-production resource shutdowns during non-business hours.
- Integrated **DevSecOps** practices using **SonarQube**, **Veracode**, **Retina**, and **ECR** scanning to enforce security and code quality standards.
- Implemented AWS Application Load Balancer (**ALB**) host-based routing for scalable service delivery.
- Troubleshoot Docker, Kubernetes, and CI/CD pipeline deployment failures faced by application teams.

AWS DevOps Engineer

Infosys Limited; Client: ARCELOR MITTAL STEEL

August 2022 – April 2026

- Designed and implemented CI/CD pipelines using **Jenkins** shared libraries, enabling automated deployments across DEV, QA, and PROD environments.

- Provisioned and managed infrastructure using **Terraform (IaC)** with reusable modules for consistent multi-environment setups.
- Built and deployed containerized applications using **Docker** and **Kubernetes (EKS)** with Helm-based release management.
- Implemented **build-once-run-anywhere** strategy by promoting artifacts across environments using Helm charts and ECR.
- Monitored infrastructure metrics using **Prometheus** and **Grafana**, tracking CPU, memory, and disk usage across Linux servers via Node Exporter.
- Executed end-to-end release process including **feature branching**, PR approvals, JIRA-based change management, and production deployments.
- Developed and maintained centralized CI/CD pipelines supporting multiple tech stacks (Java, NodeJS, Python).
- Improved configuration management and VM provisioning using **Ansible** (RHEL 9) along with Shell scripting for operational tasks.
- Monitored application logs using **ELK** stack (Filebeat, Logstash, Elasticsearch, Kibana) to analyze logs, identify errors, and troubleshoot issues across VM and EKS environments.
- Enabled **scalability** and **high availability** using Kubernetes (**HPA**), VM **auto-scaling**, and multi-AZ architecture.
- Provisioned and controlled EKS clusters using Terraform (modular IaC) by orchestrating VPC, security groups, IAM roles, node groups, and ECR integration through Jenkins pipelines.

EDUCATION

B.Tech in Mechanical Engineering

RVR & JC College of Engineering, Guntur | 2022
